

AIRFLOW DESIGN SERVICES LTD.

Specialist Ventilation Engineers
Design, Manufacture and Installation

ENVIRONMENTAL POLICY

It is the policy of Airflow Design Services to minimise the environmental effects of the company's activities and comply with legal and statutory requirements where applicable.

To actively conserve energy (electricity, oils, fuel, gas etc.) within the operational capabilities of the company, and to progressively reduce energy wastage as a result of improved utilization, insulation, servicing and maintenance of equipment, vehicle journey planning etc.

To avoid the use of toxic, hazardous and non-recyclable materials used as a result of the company's activities as far as is reasonably practicable.

To re-cycle materials where practical and encourage environmental awareness amongst our suppliers and customers, supporting their initiatives in environmental management when appropriate.

To ensure that sub-contractors maintain appropriate licenses in respect to controlled waste management and disposal.

To ensure environmental awareness amongst our employees and subcontractors, and to provide a safe and suitable environment within which they can work,

To adopt an integrated management approach in respect to Quality, Health & Safety and Environmental management systems, and to provide the necessary resources, information and training for our employees to ensure effective implementation.

To monitor and review our Environmental Policy in accordance with statutory requirements and the achievement of policy objectives to ensure effective environmental management company-wide.
